4.1 Digital Inclusion & Addressing Health Inequalities

[Company] develops digital software for community pharmacies in England, with the aim of widening access to essential NHS clinical services and improving patient outcomes. The current platform enables pharmacy teams to contact patients instantly using their NHS number and NHS-verified mobile number, and is expanding into consultation software for Pharmacy First, NHS Blood Pressure Checks and the NHS Contraception Service. These services are designed to reduce pressure on GP practices and expand equitable access to care within local communities.

Our products are built using person-centred design principles so that pharmacy teams of varying digital confidence can complete safe and efficient consultations with minimal friction. Screens are structured to reduce unnecessary clicks, limit information overload and support quick decision-making in busy pharmacy environments.

We specifically address digital exclusion by minimising patient-side requirements. Patients do not need an app, login or portal account. Communication is sent directly to NHS-verified mobile numbers, enabling pharmacies to reach individuals who may lack broadband access, email accounts or confidence navigating digital portals. This significantly reduces barriers for groups at risk of poor digital engagement, including older adults, people with lower digital literacy and those with limited access to online services.

Onboarding and training materials are inclusive and adaptable: step-by-step guides, short video walkthroughs and simplified quick-start sheets support different learning preferences. Content is written in plain language and is compatible with assistive technologies.

4.3 Environmental Stewardship & Net Zero Commitment

[Company] is committed to supporting NHS England's environmental objectives and aligning with the national target of Net Zero emissions by 2050, as set out in the amended Climate Change Act 2008 and reinforced through NHS Net Zero ambitions.

- Remote-first model with no office premises, reducing Scope 1 and Scope 2 emissions to effectively zero.
- Paperless by default: onboarding, training, documentation and client materials are delivered electronically.
- Virtual meetings for internal and client engagement, avoiding travel emissions.
- Cloud hosting partners prioritised for environmental commitments, with renewable-powered options under review to reduce Scope 3 emissions.
- Low-carbon behavioural guidance embedded in staff training, with optional low-carbon nudges planned within product workflows.

Looking ahead, planned initiatives include annual sustainability reporting, carbon monitoring for home-working energy use, deeper engagement with suppliers who publish verified sustainability metrics, and embedding environmental considerations into procurement and product design. A full Carbon Reduction Plan, prepared in accordance with PPN 06/21, accompanies this submission.
